

MTA SMART

The customizable dashboard, perfect for light vehicles and motorcycles

Wolfsburg, 13 November 2018. MTA, a multinational company headquartered in Italy, known for the development and production of a wide range of electromechanical and electronic products for major OEMs, showcases during Electronica show (Hall B4, Stand 536) the customizable dashboard Smart, perfect for light vehicles or motorcycle applications.

Smart is a compact instrument (162 x 97 x 41.3 mm) with square and modern lines and it reminds the latest generation of smartphones with which, starting from September 2019, it will interface via Bluetooth.

Smart stands out for its 4.3" color TFT screen and 10 indicators for turn signals, lights, fuel, etc. Smart's hardware heart is a powerful microcontroller that supports 2.5D graphics, similar to those of videogames, that allow it to display images with a certain detail and depth.

The Smart TFT features sophisticated production technology that ensures the visibility of the dashboard in every condition of sunlight, even intense. In addition, the TFT cover glass is glued to the display using optical bonding, which prevents the fog effect and the contamination with dust or other dirtiness. The technical solutions adopted ensure an IP67 degree of protection, confirming its outdoor spirit.

Smart can be customized by OEMs through MTA Studio[®], a software developed by MTA that allows to tailor the device to the specific needs of vehicles; customers can as well align the screen-printed graphics of the cover glass and the indicators with the image of the brand.

Smart, like the other dashboards, displays and electronic control units belonging to the MTA Studio range, is developed and manufactured in Italy, in MTA's Rolo plant, a site featuring the latest technologies and accredited according to the most stringent and current regulations of automotive sector.
