

MTA

A Smart dashboard for e.GO Life

Codogno (Lo), 8th July 2019. MTA, a multinational company headquartered in Italy, known for the development and production of a wide range of electromechanical and electronic products for major OEMs, today announces the new partnership with e.GO Mobile, the German manufacturer of electric vehicles. The collaboration covers the supply of MTA's Smart dashboard, belonging to the company's customizable electronic products, for the newly marketed e.GO Life, a 4-seated electric city car offered in 3 different battery-versions.

The Smart dashboard for e.GO Life is a compact instrument with square and modern lines, standing out for a 4,3" color TFT with custom screen printed graphics and dedicated tell tales, typical of electric drive. The TFT features sophisticated production technology and is covered by a mineral glass optically bonded on it. Both characteristics ensure the visibility of the dashboard in every condition of sunlight, even intense. Smart is able to display images with a certain detail and depth thanks to a powerful microcontroller, able to support 2.5D graphics similar to those of videogames.

Smart was supplied with a basic software that e.GO Mobile engineers were able to implement thanks to MTA's proprietary tools: MTA Studio®, a software that allows OEMs to customize displays, dashboards, and electronic control units and MTA Gate, a specific tool designed for End of Line Department.

Daniel Franze, Senior Manager Electric/Electronic in e.Go Mobile, explained how the software, together with a dedicated electronics team in MTA, has supported e.GO development team. "MTA Studio" said Franze "met our needs for creating a functional and visual appealing dashboard. With MTA Studio, in fact, we have a tool which is easy to learn and enables us to create a user interface for our needs. We are really happy we chose MTA as the supplier of our dashboard since this gave us the opportunity to create our own software with the flexibility and a fast response to new requirements. MTA moreover supported us in every development phase being very responsive to all questions we asked."
